**05/12 – 01/13 :: Senior Software Engineer
SyllogisTeks, Chesterfield, MO**

Client: Cass Information Systems
Project: Global
Description: The Global Processing System uses complex database driven rules to verify billing for various clients in the transportation industry.
Technologies: SQL Server 2008 R2
Responsibilities: Developed new processes using stored procedures and maintained existing processes to import data and process rules against that data on a daily basis.

**05/11 – 04/12 :: Senior Applications Developer
AVALA Marketing Group, Inc., Fenton, MO**

Project Title: eConnect Customer Service Index
Description: The eConnect Customer Service Index (CSI) provides survey processing functionality to various companies.
Technologies: C#, ASP.NET, Windows Service, SSIS, SQL Server 2008 R2
Responsibilities: Designed and developed several aspects of the system including a job processing windows service, SSIS packages to import and process various data files, validation stored procedures to validate and clean data being imported into the system and a user interface to build surveys to be printed and displayed online for end user processing.

Project Title: eConnect Lead Management System
Description: The Fleet eConnect Lead Management System provides a lead management solution to various companies.
Technologies: C#, ASP.NET, Windows Service, SSIS, SQL Server 2008 R2
Responsibilities: Responsibilities on this solution are primarily supportive. Adding functionality as the need arises.

**02/10 – 04/11 :: Owner and Developer
Blue Collar Development, LLC, O'Fallon, MO**

Overview: As an owner and developer of Blue Collar Development my responsibilities depend on the current client and project. These responsibilities include any aspect of software development: project management, requirements gathering and documenting, solution development, testing and deployment.

Client: J.W. Terrill
Project: Sagitta Reporting Tool
Technologies: ASP .NET (v2.0), SQL Server 2005, C#
Overview: Created a solution to retrieve information from a third party via web services. The solution included scheduled jobs to retrieve data which was then stored in a Sql Server and viewed using a web front end.

Client: Byrne Software Technologies, Inc.
Technologies: WinForms VB.NET (3.5), Development Tools for Office, Meridian Systems Proliance
Overview: Developed several applications to integrate business processes with Meridian Systems Proliance

11/08 – 02/10 :: Programmer Analyst

American Railcar Industries, Inc., St. Charles, MO

Technologies: ASP .NET (v2.0), SQL Server 2005, SQL Server 2008, SSRS, SSIS

Responsibilities: I was responsible for the support and maintenance of several pre-existing Fleet Management systems. These systems included a mechanical system to track and report various data on railcars, a shopping system to track and report on maintenance work performed on a railcar, a data warehouse to provide various reporting needs to the Fleet Management group.

7/07 – 10/08 :: Programmer Analyst

Byrne Software Technologies, Inc., Chesterfield, MO

Client: CB Richard Ellis

Project Titles:

- Invoice Quick App: Provides customer with quick entry of invoices into Proliance
- Commitment SmartDoc: Provides customer with quick entry of contracts and change orders into Proliance.
- Schedule Upload Quick App: Provides customer the ability to import Microsoft Project files into Proliance.
- Budget/Transfers SmartDoc: Provides customer the ability to create budgets in Proliance.

Technologies: WinForms VB.NET (2.0), Development Tools for Office, Meridian Systems Proliance

Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the systems. Responsibilities currently include the support and maintenance of the production system

Client: Westfield UK

Project Titles:

- Invoice Quick App: Provides customer with quick entry of invoices into Proliance
- Proliance MessageBus Integrations: Automated integration of Proliance and 3rd party applications.

Technologies: WinForms VB.NET (2.0), Web Services, SQL Server 2005, Meridian Systems Proliance

Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the systems. Responsibilities currently include the support and maintenance of the production system

7/00 – 7/07 :: Senior Programmer Analyst

Forest Pharmaceuticals, Inc., Earth City, MO

Project Title: Fleet Website

Description: The Fleet Website was developed to provide all drivers of the company leased vehicles a method to view information regarding their leased vehicle. It also provides a means for the Fleet department to provide information regarding various fleet related policies.

Technologies: WinForms VB.NET (1.1), ASP .NET (v2.0), SQL Server 2000

Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the system. Responsibilities currently include the support and maintenance of the production system.

Project Title: Returns Processing System (RPS)

Description: The Returns Processing System was developed to provide the Credit department with a means to price returns processed by a third party vendor. The system also interfaces with SAP sending it all the pricing information via sales documents so payment processing can occur in SAP.

Technologies: WinForms Visual Basic .NET (v1.1), Crystal Reports, SAP, SQL Server 2000

Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the system. Responsibilities currently include the support

and maintenance of the production system including adding new functionality as the user requests.

Project Title: Lockout/Tagout (LOTO)
Description: The Lockout/Tagout application was developed to provide manufacturing with a means to manage and report on all their lockout/tagout procedures.
Technologies: ASP.NET (v1.1), Crystal Reports, SQL Server 2000
Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the system. Responsibilities currently include the support and maintenance of the production system including adding new functionality as the user requests.

Project Title: Fleet Management System (FMS)
Description: The Fleet Management System was developed to provide the Fleet department with a means to track and maintain over 3000 leased vehicles. The system also interfaces with SAP to process bills.
Technologies: WinForms Visual Basic .NET (v1.1), Crystal Reports, SAP, SQL Server 2000
Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the system. Responsibilities currently include the support and maintenance of the production system including adding new functionality as the user requests.

Project Title: Automation of Reports and Consolidated Order System (ARCOS)
Description: ARCOS automates the reporting of the movement of controlled substances. It interfaces with SAP getting the movement information and provides several reporting options for generating reports and cover letters for the federal DEA and several state DEAs.
Technologies: ASP 3.x, Visual Basic 6.0, Crystal Reports, SQL Server 2000
Responsibilities: I was responsible for the initial gathering of requirements and documenting them and for designing and developing the system. Responsibilities currently include the support and maintenance of the production system.

Project Title: Forest Contract And Rebate System (FCRS)
Description: FCRS tracked and maintained all contracts on the products sold by Forest. It was also used to process chargebacks on products purchased at wholesale price. This system interfaced with SAP by saving all the contracts to SAP and by sending the chargeback information for payment to the various customers.
Technologies: Visual Basic 6.0, ASP 3.x, Crystal Reports, SAP SQL Server 7.0
Responsibilities: I was responsible for the support and maintenance of the production system. These duties included:

- Developing a process to notify wholesalers of contract and member changes via EDI
- Developing a process to notify wholesalers of chargebacks via EDI
- Upgrading client side use of Crystal Reports to a web-based Crystal Reports solution.
- Developed and maintained internal web applications for contract and rebate system.
